Infix to Postfix Conversion • We use a stack • When an operand is read, output it • When an operator is read -Pop until the top of the stack has an element of lower precedence -Then push it • When) is found, pop until we find the matching (• (has the lowest precedence when in the stack • but has the highest precedence when in the input

Prefix/Infix/Postfix Notation - ACSL

Prefix/Infix/Postfix Notation One commonly writes arithmetic expressions, such as $3 + 4 * (5 - 2)$ in infix notation which means that the operator is placed in between the two operands. In this example, the answer is 15 because the order of operations is used which most people remember as PEMDAS. In other
